did not inspect	All 80 mats, it was noted that one mat was upside down, Pat Brin and Michael sign (lockers) fixed on the spot	The connection between the second to last and last mat is missing a piece, making a significant tripping hazard. The sand is building up under that mat at that spot, creating a hump. There needs to be additional mats installed, including a 7 at the end.	Some issues, brought to attention of Paul, who notes that the Moby mats are stored at the beach and that Steve has the key. He will request Steve fix missing connector and install additional mats.	Still not fixed, tested Paul, who it out today. I will follow up once Moby mats are supposed to have been thought we had more?
